Art Unit: 2652

1. Restriction to one of the following inventions is required under 35 U.S.C. § 121:
 - I. Claims 1-24, drawn to a “magnetic tunnel junction (MTJ) sensor”, classified in class 360, subclass 324.2.
 - II. Claims 25-46, drawn to a “method for fabricating a magnetic tunnel junction (MTJ) sensor”, classified in class 29, subclass 603.01.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions of groups II and I are related as process of making and product made, respectively. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product as claimed can be made by another and materially different process, such as a process not including “removing”, for instance.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2652

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 C.F.R. § 1.143).

5. Any inquiry concerning the above referenced application should be directed to the examiner, Craig A. Renner, whose telephone number is (703) 308-0559, and whose facsimile number is (703) 872-9314. The examiner can normally be reached Tuesday through Friday from 7:30 a.m. to 6:00 p.m. E.S.T.
